

ALEC GANY

HEALTHCARE DATA ANALYTICS | APPLIED DATA SCIENCE

Madison, WI | (608) 286-9440 | agany524@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Applied Mathematics graduate with healthcare technology, clinical operations, and analytics experience. Uses SQL, Python, Power BI, Excel, and Epic systems to investigate data and workflow issues, build interpretable analyses, support operational decisions, and communicate findings to technical and nontechnical stakeholders.

TECHNICAL SKILLS

Analytics: SQL, Python, Pandas, Scikit-learn, Power BI, DAX, Excel, Google Sheets, data cleaning, dashboard reporting, data validation, root cause analysis

Healthcare & Systems: Epic Prelude, Cadence, Real-Time Eligibility, healthcare operations, workflow analysis, process improvement, technical documentation

PROFESSIONAL EXPERIENCE

American Red Cross | Blood Collections Technician I / Phlebotomy Instructor

Aug 2023 - Present

Madison, WI

- Coordinate donor flow, equipment, documentation, and competing operational priorities in a regulated, capacity-constrained clinical environment.
- Train and coach staff on procedures, equipment, safety requirements, and quality standards; completed team-lead and drive-lead training.
- Use operational reports, scheduling information, and real-time conditions to identify bottlenecks, allocate work, and support safe, timely service.

Epic Systems | Technical Solutions Engineer

Aug 2022 - Mar 2023

Verona, WI

- Investigated complex software, data, and healthcare workflow issues across Epic Prelude, Cadence, and Real-Time Eligibility applications.
- Contributed to remediation of more than 40,000 patient records while maintaining data integrity and documenting technical findings.
- Translated technical issues for customers, project teams, and stakeholders and identified process improvements through structured root-cause analysis.

SELECTED ANALYTICS PROJECTS

Operational Capacity Analysis | Healthcare Operations Analytics

- Analyzed anonymized scheduling, capacity, donation-mix, calendar, and weather data for a fixed-site blood donation center; found that weekend constraints and platelet-heavy schedules created more planning risk than weather alone.

Heart Disease Risk Prediction | Applied Machine Learning

- Built a Random Forest classifier in Python and tuned the decision threshold from 0.5 to 0.3; on the held-out test set, recall increased from 75% to about 90%, with 3 false negatives among 32 positive cases. Results are exploratory and not clinical validation.

Sega Portfolio Analysis | Strategic Analytics

- Cleaned and grouped a 1,400+ record dataset with Pandas, modeled it in Power BI, and used DAX measures to examine platform mix and user-score volatility; identified a shift toward PC/mobile and higher variability among PC releases.

EDUCATION

Franciscan University of Steubenville | B.S. Applied

May 2022

Mathematics, Magna Cum Laude (3.8 GPA)
